Dear Ms. Stoner,

My name is ... and I am a 6th grader at the United Nations International School. In one of our classes, we started learning about the Millennium Development Goals that the UN had made, and these goals are for people who need help all around the world. However, these goals are about to expire in the year 2015. As a result, we decided that we should pick an issue that we are passionate about and with this issue we want to help find a solution and take a chance, to make a change.

I chose to work on Water Pollution because it affects people all over the world and some people do it everyday, not even realizing it. In the USA, about 1.2 trillion gallons of untreated water are dumped in U.S waters. In other places, 2,746 pounds of waste and litter are thrown into the ocean. Furthermore, over 1 million seabirds and sea animals die each year, and when they die each year, their population decreases.

My purpose in writing this letter is that I want to ask if you want to take a stand and help. I have written an executive report that indicates many ways on how you can help and why you would want to help. As I was reading through your site, I saw specific goals on how you wanted to maintain the cleanliness of water. One of them was water monitoring, water quality research, drinking water and systems and, water tools and technology. I would like to help create awareness about this issue and participate in some of your water projects.

Thank you for taking your time to read this letter and my report. I hope that you may kindly respond to me by email or by home address since school is almost out for summer vacation. We've worked hard to get this far in our work and, hopefully, we can make a change.

Sincerely,
